Revision 1

CERTIFICATE VALID FROM:

Oct 05, 2018 To Oct 04, 2019

AUDIT TYPE:

Announced Audit

AUDIT SCOPE:

Conventional whole dry onions are received from the company's growing operation and outside growers. The processes included receiving bulk onions from the field and transfer into wooden bin for on-site storage prior to packing. The incoming bins of onion received for packing were offloaded onto the receiving hopper by a hydraulic dump system. The onions across conveyors for visual inspection, grading, mechanically sizing, and packing. The onions were packed into mesh sacks, consumer packs, and bulk totes for storage at ambient temperature (no cooling equipment observed) and shipping. Three buildings comprised the 51,000 sq. ft. dry storage for onions in bins, 2 packing lines (main, consumer pack), and finished packed commodity storage. The facility typically operates Aug-Mar. There were 20-25 workers in the single shift. This was a dry operation without a wash step. Non-product contact water from the municipal system was used in the operation for hand washing and cleaning activities. The pest control and microbiological testing services are contracted. There were no FDA defined major allergen containing items observed in the packing and storage areas of the operation.
